

Domain Names and SSL

Creating Free SSL Certificates with Amazon ACM

Request an SSL certificate

```
aws acm request-certificate --domain-name dockerzon.nickjanetakis.com
```

- Replace my `DomainName` with yours
- Make note of the `CertificateArn` in the JSON output

Accept the certificate approval e-mail

Watch the video lecture to see how to do this

Describe your certificate

```
aws acm describe-certificate --certificate-arn xxx
```

- Replace my `CertificateArn (xxx)` with yours

List all certificates

```
aws acm list-certificates
```

(Optionally) Delete a certificate

```
aws acm delete-certificate --certificate-arn xxx
```

- Replace my `CertificateArn (xxx)` with yours
