Deploying Everything with Amazon ECS

Creating the Production Cluster

Create the production cluster

```
aws ecs create-cluster --cluster-name production
```

Copy the ECS config file you downloaded to the S3 bucket

```
# Make sure you're in the production/ folder when executing this command
aws s3 cp ecs.config s3://nickjj_dockerzon/ecs.config
```

- Replace my bucket name with yours

Verify the ECS config is in the S3 bucket

```
aws s3 ls s3://nickjj_dockerzon
```

- Replace my bucket name with yours

Edit the copy-ecs-config-to-s3 bash script with your S3 bucket name

```
